

GASGAS 700

FITTING INSTRUCTIONS

1. PEEL OFF BACK PAPER

Begin by removing the protective back from the adhesive surface and proceed to slice a 5 cm gap down the center of the paper.

2. SET THE POSITION

Set the position of stickers on the shroud's front and back corners.

3. STICK THE GRAPHIC

Affix the sticker onto the area where it was previously trimmed.

4. PEEL OFF BACK PAPER

Remove the back paper gradually toward the front, leaving around 10 cm exposed.

5. PRESS THE STICKER

Gently apply pressure to the sticker using your finger, gradually moving towards the front until you reach the edge.

6. HEAT UP THE STICKER

Apply heat from a hair dryer to the lower section of the sticker. As the sticker becomes more pliable, press it firmly onto the surface, working your way towards the edge in a slow and deliberate manner.

7. PRESS THE STICKER

Peel off the back paper on the top of the panel.

8. PEEL OFF BACK PAPER

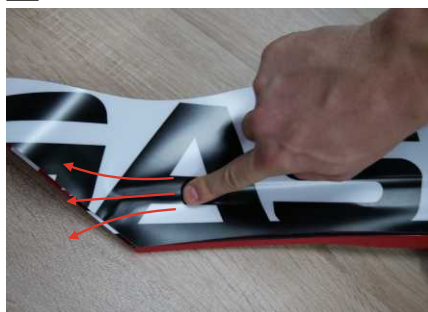

Press the sticker gently and gradually to ensure it adheres completely to the upper panels edge.

9. FOLD OVER THE EDGE

Remove the back paper and apply heat to activate the adhesive of the sticker.

10. HEAT UP THE STICKER

Gently apply pressure on the sticker using your finger and move it towards the back until you reach the edge. It's best to begin from the crease and work your way outwards.

11. PRESS THE STICKER

Remove the remaining back paper from the sticker. Use your fingers to firmly press the sticker onto the panel, starting from the back and working towards the front edge.

12. LET THE ADHESIVE BOND

To ensure optimal adhesion, allow the plastic to sit at room temperature for a full 24-hour period. The following day, carefully inspect the edges and gently apply pressure to any areas where the sticker may have become detached.
